Hyperstone to showcase their Flash Memory Controller products at the Embedded Expo in 2017

Konstanz, Germany, December 13, 2017 – Flash memory controller specialist Hyperstone has announced that they will be exhibiting at the Embedded Expo next week in Shenzhen, China.

At the show, Hyperstone will be showcasing their U9 family of Flash memory controllers that together with provided firmware offer easy-to-use turnkey solutions. Designed for secure, industrial, robust Flash memory drives, the controllers are compatible with host systems that have USB 3.1 SuperSpeed 5 Gbps interfaces. Alongside their state of the art USB controllers, Hyperstone's S8 family of Flash memory controllers will be presented. These controllers are also designed for industrial, high endurance Flash memory cards or modules compatible with host systems that have SD or eMMC interfaces.

Another exciting new product from Hyperstone at the show is the company's new F9 CompactFlash (CF) controller. Hyperstone supports legacy host interfaces and strives to support customers with longer-term storage solutions and interfaces that have been in the market for decades. Other CompactFlash (CF), SD, USB and SATA products will also be on show. Two Application Programming Interfaces (API) development boards will also be featured. This software enables developers to add their own customer firmware extensions (CFE) to controllers, allowing customers to produce innovative and unique designs.

Along with their API, Hyperstone will display an array of customer products based on their controllers. This gives visitors the opportunity to see how they can individually embed Hyperstone products into their own design. Additionally, there will be boards with integrated controllers on show. Of interest to engineers and R&D firmware/ hardware designers, Hyperstone will also present the demands and storage solution trends across certain markets, explaining how customers can integrate products into different vertical markets.

Hyperstone welcomes industry professionals to booth 1A53 at Embedded Expo 2017, either to learn more about their extensive range of reliable Flash memory controller products, or to discuss designs and potential projects. The Embedded Expo 2017 is the most sought-after embedded industry event in China, and will be held at the Shenzhen Convention and Exhibition Centre from December 21. - 23, 2017.

EMBEDDED EXPO

About Hyperstone

Hyperstone is a fabless semiconductor company based in Konstanz, Germany with a strong focus on world class flash memory controllers for industrial embedded markets. Its products set the standard for high-reliability flash management providing confidence for NAND flash performance in mission critical situations. Hyperstone's products include microcontrollers for various host interfaces and performance points, e.g. SATA, USB, CF/PATA, SD/microSD and eMMC. Flash controller firmware is supplied complementary to the controllers and customized for each flash and application. Hyperstone is a member of the CML Microsystems Plc group, traded on the London Stock Exchange.
